

# Table Assembly and Leveling

## Assembly

Turn table top to top side down position with leg anchor screw holes up.

Interlock the legs so that each set touches the top where the screw holes are.

Position the legs so that the slot on the leg aligns over a screw hole.

Place a washer on a bolt, insert into screw holes and tighten.

## Leveling

Note the rings in the center of the leg pair that holds each leg together.

With the table upside down and the legs Interlocked and ready to be attached to the table top, note the leg pair and ring above the ring on the other pair. THAT leg pair may need a washer placed between the table top and the leg bracket for better leveling as shown in the close-up image.
