

# Duncan Crystals<sup>™</sup> glazes

## Tips & Techniques

- Stir the glaze and apply 2 coats without disturbing the crystals, then mix them in for the **3rd** coat.
- Keep the crystals sparse near the **bottom** of the piece to keep them from flowing into the kiln shelf.
- Crystals Glazes should be fired to cone 06.
- Try applying Crystals in **combination** with other glazes for a custom look.
- Crystals are available in both food safe and non-food safe varieties.
- Projects painted with Crystals Glazes should **not** be dipped before firing.
